Department of Fisheries and Oceans. 2007. Quebec Marine Fisheries - Annual Statistics Review 2004-2005, 239 p.

Foreword

The hard times that the Quebec fishing industry has been experiencing in recent years underscore the importance of producing reliable statistics that are as up to date as possible. The requests for information that we receive have not only become more numerous and more pressing, but above all more complex. This is the background to this annual statistical report.

The twentieth edition of the Annual Statistics Review of Quebec marine fisheries, produced by the Department of Fisheries and Oceans (DFO), paints a detailed portrait of the industry in 2004 and 2005. In a nutshell, in this last year, the volume of landings totalled 61 350 mt and had an associated value of close to $190 million and in 2005 the volume of landings totalled 56 730 mt and had an associated value of close to $152 million.

In the present edition, you will find a section entitled: **"Statistical Profile of Seal Hunt"**. In this section, we are presenting an overview of the activities related to seal hunt in the Quebec Region. You will find information concerning the number of licences issued per type and maritime areas as well as information concerning the landings of harp seal by fleet, and finally, data relating to the seal hunt observation activities.

A supplement entitled "Quebec Marine Fisheries: 2004 and 2005 Highlights" is included in a special pocket on the back cover. This handy, comprehensive reference tool was prepared jointly by the Statistics and Licensing Division and the Policy and Economics Branch to provide a snapshot of the state of Quebec's fishing industry in 2004 and 2005.

The Statistics and Licensing Division, which is responsible for this publication, is mandated to compile, process, analyse and publish data on Quebec marine fisheries. The statistics produced are of vital importance, first, to assess and highlight the economic value of the industry, and second, to provide managers and scientists with a basis for the various analyses required for effective fishery resource management.

It is important to note that a federal-provincial agreement between the Department of Fisheries and Oceans (DFO) and the Quebec Department of Agriculture, Fisheries and Food (MAPAQ – Ministère de l'Agriculture, des Pêcheries et de l'Alimentation du Québec) has laid the groundwork for greater coordination in collecting data. It aims to eliminate duplication of effort by public servants seeking information from fishing industry players and to promote intergovernmental data sharing.

The three types of data in this report have been obtained in different ways. Catch data are based on the sales transactions between fishers and fish buyers when each vessel lands its catch. For data on fishing effort, used by scientists in their research work, we rely upon the excellent cooperation of skippers, who provided information on fishing grounds, type of gear, target species and species caught, among other things. Finally, statistics on fishermen, fishing fleets and licences come from the licensing process.

The quality of the data in this review depends on (a) the quantity of data that our system gathers from fishermen, buyers and processing plants, and (b) the accuracy of the data. With limited resources, the Statistics and Licensing Division does everything within its power to check the data it gathers, but cannot guarantee that everyone involved submitted all their data. We turn to resource management programs such as enterprise allocations (quota licences), for which strict monitoring methods exist, to ensure that data entered into the system are consistent with observations of landings by dockside monitors.

This does not however apply to every fishery. In addition to that, consultations with Inspectors, Protection Officers, Policy and Economics Branch representatives as well as with industry representatives further enable Statistics and Licensing Division staff to produce reliable, representative data.

The descriptive narratives accompanying the tables and figures are not intended as an in-depth analysis of the state of the marine fisheries in Quebec in 2004 and 2005.

The publication of this annual review of Quebec marine fisheries has been made possible by the hard work and rigour of the Statistics and Licensing Division staff and groups in Sept Îles, Gaspé and Cap-aux-Meules. We would also like to thank the Policy and Economics Branch for its important contribution.

We wish to take this opportunity to thank the fishermen, buyers and producers for their ongoing cooperation; knowing that supplying statistics is an extra burden for them.

All of us in Statistics and Licensing Division hope that you enjoy reading this annual review and welcome any comments or ideas that might help us improve it.

Methodology

The data in this publication are taken from the statistical system of Fisheries and Oceans Canada, Quebec Region. The system consists of three components, all of which were used to produce this report: catch-effort-quotas, people-vessels-licences, and processing plant production and workforce.

Data on people, vessels and licences come from licensing paperwork. The number of licence holders corresponds to the number of people registered with the Department of Fisheries and Oceans, who operated autorized fishing gears under the terms of a commercial fishing licence in 2004 and 2005. The number of vessels is the number of fishing boats licensed in 2004 and 2005. The number of licences is the total number of fishing licences issued, but not necessarily active, in 2004 and 2005.

Data on fish and shellfish landings are provided by commercial buyers, who are required to provide us with a copy of the DFO form to record their purchases from fishermen. Each transaction of this type generally corresponds to one fishing trip. The Enterprise Allocation Monitoring Program, initiated in 1989, now covers some mobile and fixed gear vessels less than 64' 11" and some 65'-100' long, for groundfish in areas 4RST and 3PN. The program also affects all crabbers and shrimpers, as well as many scallopers and surf clam fishers. For these fleets, an additional check has to be carried on the data supplied to the Statistics Service.

Furthermore, to estimate the volume of fish eaten by commercial fishermen and their families, the volume of fish sold directly to the public or used as bait and processed by fishermen themselves, we use data supplied by DFO fishery officers and information from fishermen's associations. **This type of data, called "supplementary purchase slips" is being included only in tables where we added a note to that effect.**

Data are gathered, coded and entered locally in each of the maritime sectors: Gaspé, Sept Îles and Cap aux Meules. The concepts and definitions used meet the standards set by the Statistical Coordinating Committee for the Atlantic Coast (STACAC) and are thus compatible with the systems of the other Atlantic regions (the Gulf, Nova Scotia and Newfoundland). Papers published by the STACAC provide more information on the concepts and definitions used here (see reference list). Some of them are available from Statistics Service at the Quebec City Regional Office.

Figures in the tables on landings have been rounded, so they may not add up to the totals shown.

It should also be noted that some data on salmon, eel, smelt, tomcod, capelin and sturgeon landings were supplied by the Quebec Department of Agriculture, Fisheries and Food (MAPAQ - Ministère de l'Agriculture, des Pêcheries et de l'Alimentation du Québec).

Another important point is that until 1992, seal-hunt licences were issued in the maritime sectors and did not figure in the publication of the various statistical tables on fishing licences. In 1993, the policy on licensing for the seal hunt was amended to make it much more like the ones for other types of licences, so seal-hunt licences are now counted the same way as other existing licences. To avoid skewing the trend analysis, we decided to publish the seal-hunt data separately. Statistical table 4A gives the number of seal-hunt licences according to quite specific parameters.

It should be noted that the process of gathering data at the source is the result of the Federal-Provincial Harmonization Agreement on the Quebec Marine Fisheries, the main objective of which was to eliminate duplication of effort in this area.

Maritime territory

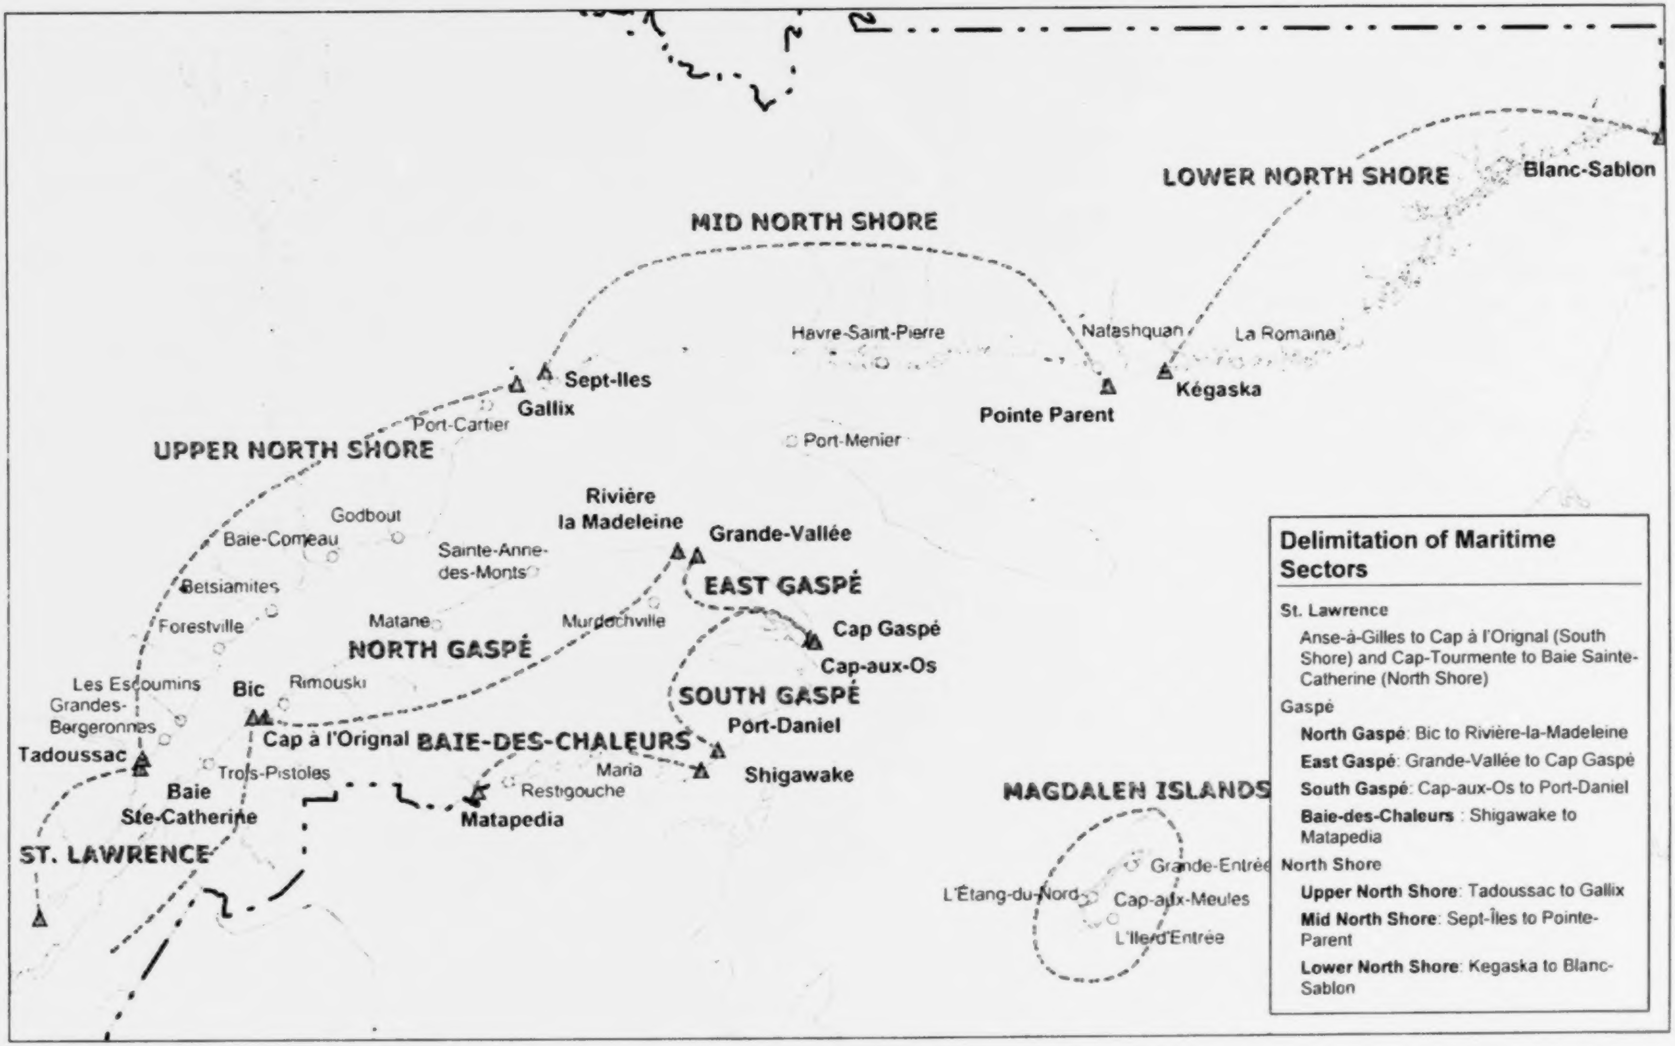
Quebec maritime territory begins at the eastern tip of Île d'Orléans and is divided into four sectors.

The St. Lawrence sector extends from Anse à Gilles to Cap à l'Orignal (on the south shore) and from Cap Tourmente to Baie Sainte Catherine (on the north shore). The North Shore sector lies between Tadoussac and Blanc Sablon (including Anticosti Island). The Gaspé sector begins at Le Bic and stops at Matapédia. The fourth sector comprises the Magdalen Islands. For more details, refer to the map titled "Maritime Territory" on next page.

On another basis, the Quebec Region maritime territory is subdivided into 28 statistical districts. These districts are defined by limits represented by geographic points and are used in most statistical systems. This standardization makes it possible to compare the data that DFO has been collecting in Quebec since 1984 with those published by the Bureau de la statistique du Québec for previous years.

The 28 statistical districts, with their geographic limits, are listed in an Appendix.

MARITIME SECTORS IN QUEBEC



Delimitation of Maritime Sectors

St. Lawrence

Anse-à-Gilles to Cap à l'Orignal (South Shore) and Cap-Tourmente to Baie Sainte-Catherine (North Shore)

Gaspé

North Gaspé: Bic to Rivière-la-Madeleine

East Gaspé: Grande-Vallée to Cap Gaspé

South Gaspé: Cap-aux-Os to Port-Daniel

Baie-des-Chaleurs : Shigawake to Matapedia

North Shore

Upper North Shore: Tadoussac to Gallix

Mid North Shore: Sept-Îles to Pointe-Parent

Lower North Shore: Kegaska to Blanc-Sablon

Conventional Symbols

o	Less than half of the smallest unit used
-	Nil or zero
%	Proportion of a quantity to another expressed as a percentage
Var. %	Percentage variation indicating the size of increases or decreases from one year to the next and calculated as follows:

$$\text{Var. \%} = \left(\frac{\text{figure from target year} - \text{figure from preceding year}}{\text{figure from preceding year}} \right) \text{X } 100$$

N.B.: All variations presented in this review refer to the years 2004 and 2005 only.

N/A	Information not applicable
N/AV	Information not available
mt	Metric ton
...	Not applicable because of different units
<>	Not publishable, because there were fewer than three buyers or fewer than three fishermen for this fishery (protected information)

Definitions of terms used in this publication

Active fisherman	Fisherman or fisherman's helper who has made at least one landing in the season.
Active fishing enterprise	Fishing enterprise that has made at least one landing in the season.
Active registered licence holders	Any person registered with DFO who uses fishing gear authorized by a commercial fishing licence. This definition does not cover fishermen helpers.
Active vessel	A vessel for which at least one landing in the reference year has been counted.
Actual deviation	Difference between data for the year under consideration and the preceding year.
Administrative regions	Regions defined by DFO. In this publication, we refer to the Atlantic administrative regions: Quebec Region: Encompasses the province of Quebec Gulf Region: Encompasses coastal areas of the Gulf in New Brunswick and Nova Scotia, as well as the Province of Prince Edward Island Nova Scotia: Encompasses the waters of the Bay of Fundy, the Scotian Shelf and Georges Bank which is the ocean side of Nova Scotia Newfoundland Region: Encompasses the geographic sector of the same name.
Atlantic Coast	Covers the Quebec, Gulf, Nova Scotia and Newfoundland regions.
Average Price	Total value of all landings sold divided by the total weight landed.

Buyer	Person or firm that commercially purchases fish directly from fishermen.
Certified plant	Any place that fish is processed for export or stored before exporting.
"Commercial fisherman" (southern Gulf)	In the Gulf, a commercial fisherman is a registered fisherman who does not take part in the fisheries fished by vessels with an LOA of 15.2 m (50') or longer and does not meet the requirements of a bona fide full-time or part-time fisherman.
Commercial fishing licence	Designate an instrument by which the Minister of Fisheries and Oceans authorizes, pursuant to his discretionary authority under the Fisheries Act, grants permission to a person including an Aboriginal organization to harvest certain species of fish or marine plants subject to the conditions attached to the licence. This is in no sense a permanent permission; it terminates upon expiry of the licence. The licensee, is essentially given a limited fishing privilege rather than any kind of absolute or permanent "right or property".
Conversion factor	Ratio used to convert the weight of a product or form of a product on landing into equivalent live weight.
Core	In order to qualify as a member of the core group, a person must meet the following criteria: - be the head of an active fishing enterprise, i.e., have fished full time for the previous two years (1994 and 1995) and have a vessel in the fishery; and - hold either two key licences, **OR** one key licence and in two of the years 1993, 1994 and 1995, have fished for 10 weeks with minimum reported landings of $5,000 from their own licences for vessels less than 35' and of $10,000 from their own licences for vessels longer than 35', **OR** one key licence and, in two of the years 1993, 1994 and 1995, have earned at least 75% of their income from fishing

License holders who meet the eligibility criteria for the Atlantic Groundfish Strategy (TAGS) or the Northern Cod Adjustment and Recovery Program (NCARP) may use the TAGS or NCARP qualifying years instead.

Key licences are defined as shrimp, crab, lobster, groundfish other than handline, scallop, herring and, on the Lower North Shore, capelin.

Division	NAFO (Northwest Atlantic Fisheries Organization) divisions.
Fishing day	Day in which fishing gear was used with the goal of catching fish to sell.
Gear	Any equipment used to catch fish.
Gulf of St. Lawrence	Coastal areas of the Gulf in New Brunswick, Nova Scotia, western Newfoundland and southern Labrador, as well as Prince Edward Island and Quebec.
ITQ	Individual transferable quota
Landed value	Monetary value of the recorded landed quantity, that is, the landed quantity multiplied by the unit price, or the value supplied by the buyer.
Landing	Quantities of fish and shellfish (molluscs and crustaceans) landed, excluding discards, measured as live weight.
Live weight	Weight (round weight) of a live fish, which can be estimated, if necessary, on the basis of the form at landing using a standard conversion factor.
Non-core	Any fisherman not qualified for membership in the core group.
Non registered licence holders	Non registered holders of active licence refer only to companies, aboriginal fishermen, successions and to licences bought back by DFO.

Other items	Includes sea urchins, lumpfish caviar, scallop roe, other seafood, and seal products.
Outside the Gulf of St. Lawrence	Waters of the Bay of Fundy, the Scotian Shelf and Georges Bank that is, the ocean side of Nova Scotia as well as the province of Newfoundland, not including the west coast and southern Labrador.
Quota	For a given species and fishing area, the catch limit set for a segment of the commercial fleet.
Specialized enterprise	Fishing enterprise that has recorded at least 25% of the average value of landings of its reference fleet.
Supplementary purchase slips	These data are used to compile all landings not recorded on general purchase receipts. This information comes from estimates from four different sources: Fish processed by fishermen Direct sales to the public Fish used as bait by fishermen Other landings (including personal consumption by fishermen and their families and sport fishing)
Value	Statistics on value are expressed in current Canadian dollars.

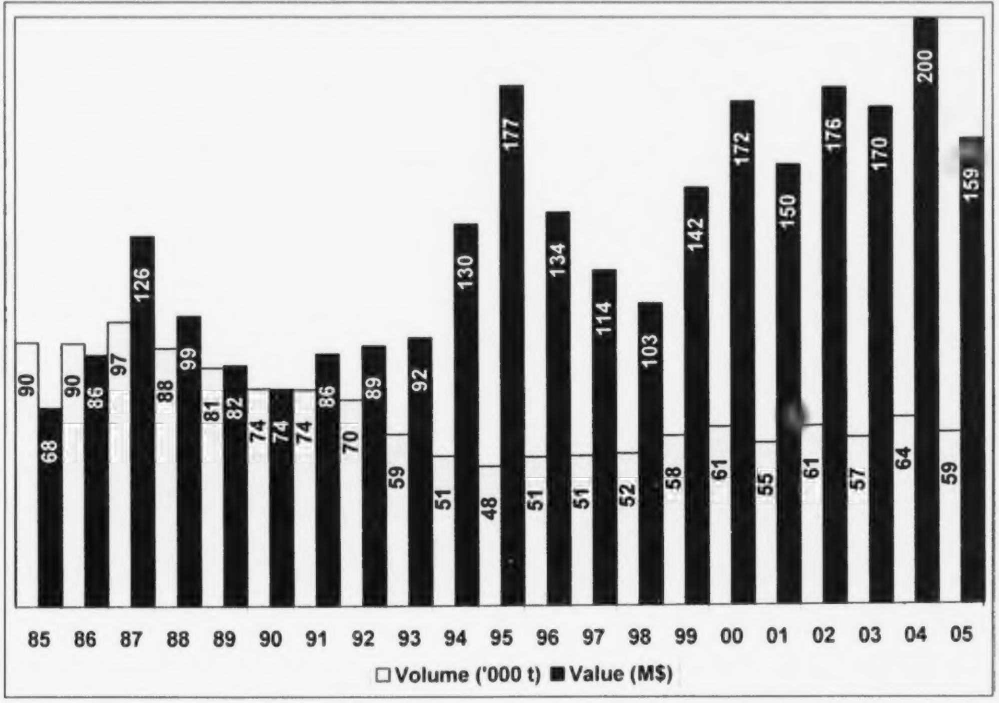
CATCH PORTRAIT OF QUEBEC SECTOR

Portrait of the Quebec Capture Sector in 2005

Quebec landed a total of 58 700 t in 2005, valued at $159 M, 9% less in terms of volume and 20% less in terms of value in relation to 2004. This decrease in landed value is mainly due to a significant drop in snow crab landed value, a species that makes up 40% of Quebec's total landings. In 2005, despite a 7% increase in snow crab catches, a $35 M loss was recorded, the result of a nearly 40% drop in landed price.

The total landed value of certain other species also fell, namely shrimp (-18%) and lobster (-3%). The 6% increase in landed price for lobster did not make up for the 10% drop in catches.

Evolution of Landings by Quebec's Fishing Industry, 1985-2005

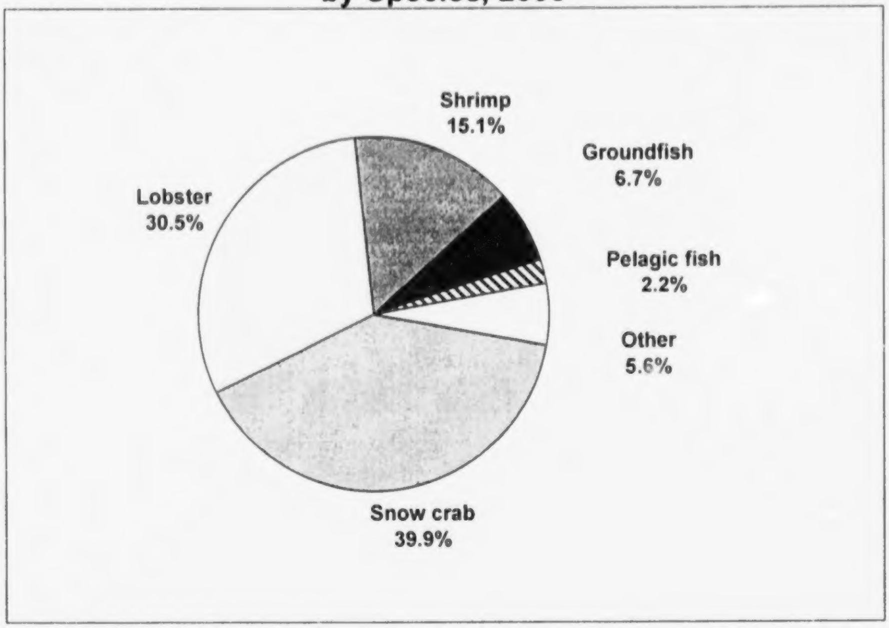


Source: DFO, Quebec Region
Note: Additional receipts are included in the landings.

Of the groundfish, cod landings increased a significant 40%. Given that the price (gutted, not beheaded) dropped over 20%, the total value of landings rose by a mere $140,000. Catches of Greenland halibut dropped 3% while the price (bled, partially gutted) rose slightly, by 4%. The scallop industry had good news, with the landed price (meat) jumping 17% and landings rising 10%.

The breakdown of landed value by species shows that snow crab remained in first place, worth $63 M and making up 40% of the total landings. Lobster was in second place with a landed value of $48 M. Shrimp followed in third place with landings worth $24 M. Together, these three crustaceans represented a little over 85% of the total landed value in 2005. Lagging far behind, groundfish and pelagic fish fetched a respective $11 M and $3 M in 2005.

Breakdown of the Value of Quebec Landings by Species, 2005



Source: DFO, Quebec Region

Regionally, Gaspé suffered the largest drop in landed value, due to the significant role snow crab plays among all of the landed species. The drop in snow crab prices therefore had a considerable impact on this region. Moreover, the substantial decrease in shrimp catches (-24%) in 2005 also forced Gaspé's total landed value to fall. The fact that certain businesses stopped processing and fishing shrimp at the end of the season was the reason behind this drop in landings.

The Magdalen Islands saw a $6 M drop in landings, caused mainly by a decrease in snow crab catches and price as well as, on a lesser scale, a considerable drop in herring and mackerel catches.

Despite being the only region that experienced an increase in landings, the North Shore's landed value nevertheless fell by a little over $9 M in 2005. Once again, the significant decrease in the landed price of snow crab is the main cause, notwithstanding an increase in catches of this species (+12%).

Evolution of Landings by Region, 2004 and 2005

RESOURCE ACCESSIBILITY

Resource accessibility

In order to achieve its objective of conserving and preserving various fish stocks, DFO imposes control measures each year. Licensing and quotas are responding to this necessity.

Quotas are used to determine the quantities allocated to each fishery, while licensing is an efficient means of controlling access to the various resources.

Licences for anadromous and catadromous species are issued by the Government of Quebec, while the Federal Government looks after licensing for all other species.

(1) Refers to NAFO (Northwest Atlantic Fisheries Organization) divisions except for Shrimp where we use the management areas as established by the Department of Fisheries and Oceans.

(2) This global quota is subdivided into individual quotas and is set for Quebec fishers only.

(3) This global quota is subdivided into individual quotas.

(4) For this total, figures originating from Newfoundland, Gulf and Scotia Fundy Regions are not final.

(5) Dates indicating the duration of the fishery except for Herring where we identify the various Spring and Fall fisheries.

(6) Unit 1 is grouping together 4RST,3PN divisions (January to May) and 4Vn division (January to May) and Unit 2 is grouping together 3Pn division (June to December) and 3Ps,4Vn divisions (June to December).

(7) For this species only, quantities are indicated in meat weight.

(8) Considering that these are individual quotas, duration periods are not specified.

(9) In accordance with Access to Information Act, we are reporting landings against quotas only where there were at least three participants, unless we have the authorization from the concerned participants.

Average landed price

The average landed price by species as indicated here reflects the prices paid to fishermen and is determined by dividing the total value of all landings by the total landed weight.

The average price takes into account the condition of the catch at landing. The advantage of this method is that the significance of the price given can be specified. An identical approach is used for each of the maritime sectors.

It should also be pointed out that the average prices in the following tables exclude supplementary purchase slips, which explains why no figure is given for some species.

TABLE 14

STATISTICAL PROFILE
OF SEAL HUNT

Statistics on Seal Hunt Activities

In this section we are presenting an overview of the activities related to seal hunt in the Quebec Region. You will find information concerning the number of licences issued per type and per maritime areas as well as information concerning the captures of harp seal by fleet, and finally, data relating to the seal hunt observation activities.

Summary of the seal hunt, Magdalen Islands, 2005 season :

Althouth the hunt season extends from November 15 to May 15 of each year, in 2005, the opening date for the seal hunt has been settled for March 29 in the Gulf of St. Lawrence. The hunt activities have been concentrated on a five-day period. The vessels with an overall length exceeding 35' have then been hunting from March 29 to April 1st, at which date the quota had been reached for this category. Concerning the vessels with an overall length less than 35', their activities stopped on April 2nd.

About forty vessels over 35' from Magdalen Islands, and more than 100 individuals hunting with vessels less than 35', have participated in the fishing effort. Unlike the previous years, the seals were close to the Magdalen Islands coasts, allowing inshore hunters to participate to at least one day of hunt activities. Their captures were comprised of beaters. 80% of the catches of the Magdalen Islands hunters are being done with vessels over 35' long.

Summary of the seal hunt, North Shore, 2005 season :

On the Quebec North Shore, 13 vessels over 35' long and approximately 90 inshore hunters, some hunting with vessels less than 35' long, have participated in the 2005 hunt. Concerning the Quebec Middle and Upper North Shore, only one vessel over 35' long and 15 inshore hunters have participated in the fishing effort.

The Lower North Shore has contributed to 82% of the catches for this Area. Finally, there were no end of season hunt for the Lower North Shore less than 35' fleet. The competitive quota attributed to this fleet in the Gulf of St. Lawrence had already been captured at the opening of the season at the end of March, period at which the Lower North Shore had not been able to participate due to unfavorable ice conditions. This type of situation did occur in the past years in this Area (see the figure « Evolution of catches, by area, per year » on page 88).

Statistics and graphics 2004-2005 :

In 2005, the overall authorized allocation was 319 517 seals out of which 89 466 were for the Gulf. of St. Lawrence. Out of this number, 58 094 seals were reserved for the vessels over 35' long.

The catches for the Quebec Region have reached 29 547 seals and were distributed as follows :

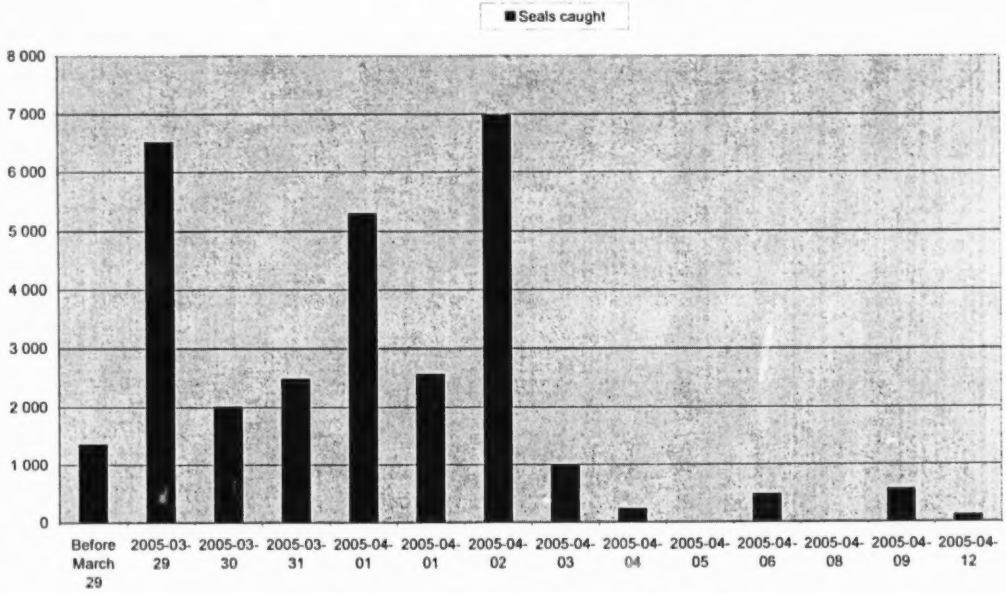
Fleet	Magdalen Islands		North Shore		Gaspé Peninsula		Total Quebec	
	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels
< 35'	2 867	N/AV	5 359	N/AV	0	0	8 226	10
> 35'	12 091	40	9 230	13	0	0	21 321	40
< 35' – End of season	0	0	0	0	0	0	0	0
TOTAL	14 958	N/AV	14 589	N/AV	0	0	29 547	60

Comparison with 2004 :

Fleet	Magdalen Islands		North Shore		Gaspé Peninsula		Total Quebec	
	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels	Number of seals captured	Number of vessels
< 35'	2 199	13	2 588	N/AV	0	0	4 787	N/AV
> 35'	28 366	37	4 068	3	0	0	32 434	40
< 35' – End of season	0	0	2 108	N/AV	0	0	2 108	N/AV
TOTAL	30 565	50	8 764	N/AV	0	0	39 329	N/AV

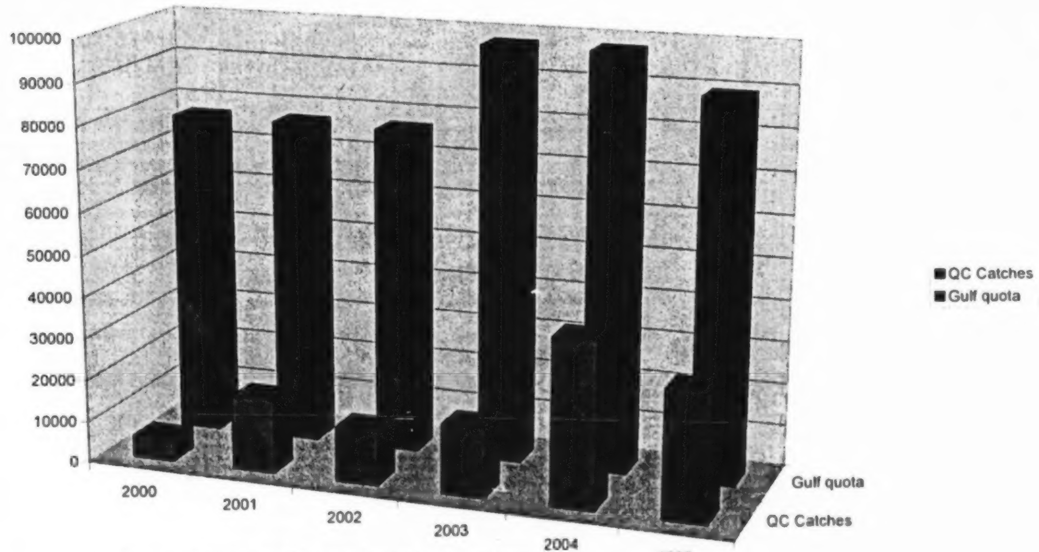
N.B. : The number of vessels is an approximation, considering that in 2005, the hunters using vessels less than 35' long were not requested to register them against DFO.

Daily catches, harp seal, 2005 season, Quebec Region



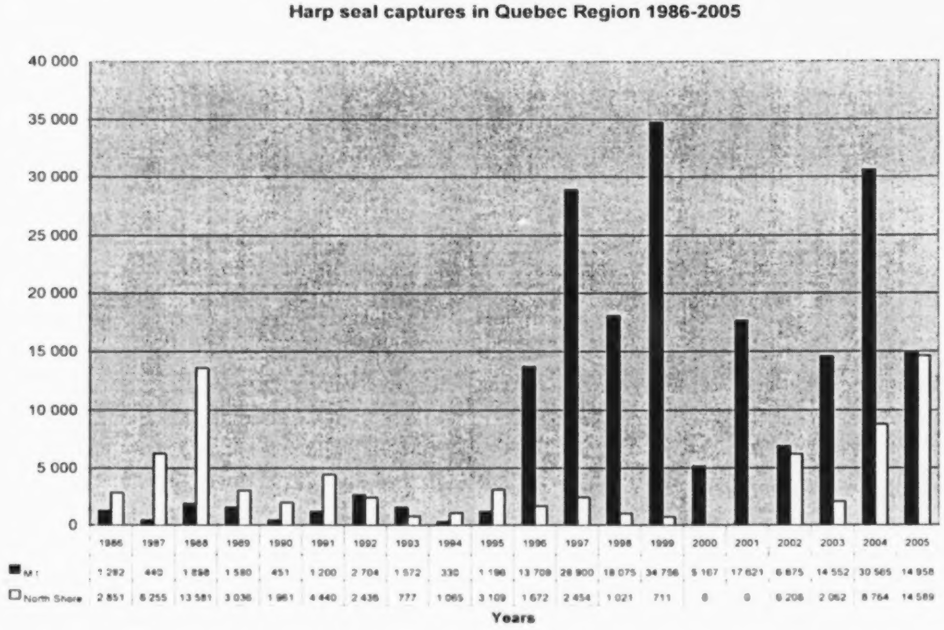
Source : Fisheries and Oceans Canada, Magdalen Islands Area

Quebec Region sealers catches and Gulf quotas
(unit : seal)



Source: Fisheries and Oceans, Magdalen Islands Area

Evolution of catches, by area, per year :



N.B. : There were no catches registered at DFO for the Gaspé Peninsula Area for the years mentioned above.

Statistics, commercial licences :

According to the recommendations made by the Industry, DFO has imposed a freeze on the issuance of sealing licences, starting in June 2004, in order to slow down the growth on the fishing effort and to identify the conditions which should encompass the issuance of commercial sealing licences. This freeze, which has been extended up to May 2007, does not apply to Grey Seal hunting licences nor First Nations members or Lower North Shore residents for 2005.

Number of commercial sealing licences issued, by type and by maritime area (2004-2005) :

Number of licences issued	Magdalen Islands		North Shore		Gaspé Peninsula		Total Quebec	
	2004	2005	2004	2005	2004	2005	2004	2005
Commercial Professional	755	817	708	798	57	59	1 520	1 674
Commercial Hunter helper	184	113	176	109	19	11	379	233
Personal usage	6	6	459	431	70	59	535	496
TOTAL	945	936	1 343	1 338	146	129	2 434	2 403

Note : All licences are not necessarily active, we can note the approximative number of participants on the first page of this chapter.

Statistics, licences to observe the seal hunt :

Each year, observers come to watch commercial seal hunt activities. In order to get to the hunt sites, observers must obtain an observer licence and respect a few conditions included in the licence. An observation licence is valid for a day and can be renewed on request. In 2005, all observers have been able to get on the ice and some have been able to renew their licence up to 4 times. People from Canada, United States, Central America and from Europe came to observe the commercial hunt. Most of them were journalists and photographs.

Seal hunt observers licences	2004	2005
Number of requests received (1)	51	106
Number of licences issued	45	60
Number of days of observation	5	5

(1) Some people did not make any follow up on their request.

Statistics, product processing :

In 2005, about 50% of the Quebec Region hunters' catches have been sold and processed within Quebec Region. The balance of the catches has been forwarded towards Newfoundland.

In Quebec, pelts provide the essential part of the value of the processed products. Once the fat is taken off the pelts and once these pelts are tanned, they take the road to Asia and Eastern Europe. The fat taken out of the pelts is then transformed into oil. Small quantities of meat are also processed for the local market and Quebec market (specialised market), as well as for personal consumption.

ECONOMIC PROFILE OF QUEBEC MAIN FISHING FLEETS

Economic Profile of Quebec Main Fishing Fleets

The Annual Statistics Review 2004-2005 proposes a section intended to the Quebec main fishing fleets. You will find in the following pages, information related to the size of the fleets, the manpower, the fishing effort as well as the average landings for these various Quebec fleets.

In order to characterize each fleet, we have classified them by main species landed, and in some cases, by fishing area, gear type and vessel length. For example, for a fisherman who is fishing groundfish, pelagic fish and crustaceans, we will classify him in the fleet where he gets the higher value for his landings, being groundfish, pelagic fish or crustaceans. In other respects, landings and average prices are always calculated according to a fleet considered as "specialized" or according to a group of specialized enterprises. The expression "specialized" refers to fishing enterprises where their landings represent at least 25% of the average value of their fleet.

In addition, we want to inform you that the data concerning the fleets presented in the next section exclude the statistics for aboriginal fleets to ensure that the average value of the landings could be calculated from comparable data.

Please note that Scallops fleets of the North Shore (fisheries on individual quotas and competitive fisheries), of the Gaspe Area and Magdalen Islands have very few participants. Consequently, data concerning these fleets cannot be disclosed in this review for confidentiality considerations.

Finally, data on the groundfish fleets will be published at a later date as changes are being made to a more precise breakdown. This data will be available on the Department of Fisheries and Oceans, Quebec Region Web site under the Statistics tab (*www.qc.dfo-mpo.gc.ca/peches/en/statistique*).

2004 - 2005 Landings
St. Lawrence

The St. Lawrence Sector is distinguished by a low level of marine fishing activity. Landings made in 2004 and in 2005 for the sector between Anse à Gilles and Cap à l'Original on the south shore, and between Cap Tourmente and Baie Sainte Catherine on the north shore, represented respectively 120,4 and 85,0 metric tons for an assorted value 0.162 and 0.160 million of dollars. Thus, 2005 landings are lower in quantity and their value has discreased of 1,5 % compared to 2004.

In 2005, we had 27 active registered licence holders, 3 more than in 2004. Concerning the number of buyers, we have 4 buyers in 2005 compared to 3 buyers in 2004.

To abide by confidentiality regulations, it is not possible for the Department to reveal any information concerning St. Lawrence sector landings. The small number of participants in marine fishery activities as well as the small amount of catches justify the application of such a confidentiality measure.

2004 - 2005 Landings
Northern Quebec

The Department of Fisheries and Oceans has no registered data for 2004 and 2005 for the Northern Quebec Sector.

PRODUCTION AND MANPOWER IN PLANT

Plant production data

This section concerns fish and seafood processed in Quebec in 2004 and 2005. In this review, production refers to any processing by a plant or any sale of a product to a merchant who buys directly from fishermen. Most of the enterprises listed here are located in the Gaspé, the Magdalen Islands or on the North Shore. Our data-collection network is concentrated in these three regions, although we did obtain information from a few firms in the Quebec City and Montreal areas.

The volume of the various products listed is based on information provided by each of the processing plants and merchants. Value is calculated on the basis of selling prices for each type of seafood.

Some figures were adjusted if there were discrepancies with the rest of the available data. When making these adjustments, we used the following information as reference points: purchase value of raw material, value of same types of products when processed and, wherever possible, from the same geographic sector, the selling price of the preceding year taking into account variations in prices and inflation.

The data are given for the whole of Quebec and by maritime sector. Note that for reasons of confidentiality, in some cases we have grouped a number of products together.

Plant workforce data

The number of employees in the 2004-2005 statistical review represents the maximum number of people who worked in the same plant over the course of the year (the month with the highest number of employees was used as the yardstick). This method of accounting is based on the following definition of an employee: "An employee is any person working for a definite period for an employer operating an establishment that processes or deals in any seafood product."

The annual employment survey of processing plants is the source of our information on employment. A few plants, however, provided us with employment information over the telephone. In a few rare cases, we made estimates, based on information gathered by DFO staff.

TABLE 48

MANPOWER IN PLANT

IN 2004 AND 2005

SECTOR	YEAR	Maximum number of employees	Net change	Quantity produced in metric tons	Quantity produced in % of total
ST. LAWRENCE AND NON-MARITIME TERRITORY	2004	233	42	6 290.4	14.30
	2005	275		5 916.9	13.75

APPENDICES

APPENDIX 1

Boundaries of Quebec maritime statistical districts

District	Geographic point	Landing point
1	Anse à Gilles to Pointe Rouge	Anse à Gilles to St-Roch-des-Aulnaies
2	Pointe Rouge to Notre-Dame du Portage	Ste-Anne de la Pocatière to St-André
3	Notre-Dame du Portage to Ste-Luce	Notre-Dame du Portage to Cap-à-l'Orignal
4	Ste-Flavie to eastern boundary of Matane County	Ste-Flavie to Petits Méchins
5	Cap-Chat to Duchesnay	Fonderie to Ruisseau Castor
6	Duchesnay to St-Hélier	Ruisseau à Rebours to Anse à Thibault
7	St-Hélier to Petite Rivière-au-Renard	Ruisseau à l'Ail to Petit Cap
8	Petite Rivière-au-Renard to Cap des Rosiers	Petite Rivière-au-Renard to Cap des Rosiers
9	Cap Gaspé to Pointe St-Pierre	Cap Gaspé to Pointe Navarre
10	Pointe St-Pierre to Brèche à Manon	Malbay to Weygand
11	Brèche à Manon to Pointe Maquereau	Brèche à Manon to Newport
12	Pointe Maquereau to New Carlisle	Pointe Maquereau to Cullens Brooks
13	New Carlisle to Rivière Grande-Cascapédia	New Carlisle to St-Siméon ouest
14	Rivière Grande-Cascapédia to Pointe Miguasha	Maria to Pointe Bourg
15	Pointe Miguasha to Rivière Restigouche	Miguasha to Matapédia
16	Cap Tourmente to Rivière Saguenay	Petite Rivière St-François to Cap-Brûlé
17	Rivière Saguenay to Bersimis	Tadoussac to Anse à Bouleau
18	Bersimis to Rivière Ste-Marguerite	Bersimis to Îles de May
19	Rivière Ste-Marguerite to Rivière Pigou	Sept-Îles to Malioténam
20	Rivière Pigou to Havre St-Pierre	Rivière aux Graines to Rivière Pigou
21	Havre St-Pierre to Rivière Kégaska	Havre St-Pierre to Pointe Parent
22	Rivière Kégaska to Baie des Moutons	Rivière Kégaska to Chevery
23	Baie des Moutons to Bonne Espérance	Baie des Moutons to Rivière St-Paul
24	Bonne Espérance to Blanc Sablon	Bonne Espérance to Îles Demoiselles
25	Île d'Anticosti	Anticosti
26	Îles-de-la-Madeleine, northern division	Havre-aux-Maisons to Lapointe
27	Île du Havre Aubert to l'Île d'Entrée	Havre Aubert to l'Île d'Entrée
28	Île de Cap-aux-Meules	Cap-aux-Meules to Cap Vert

N.B.: The geographic points that mark the boundaries of the statistical districts are shown here with the corresponding points of landing. There are thus two types of boundaries for each district.
